

II. AMENDMENTS TO SPECIFICATION

The following paragraph replaces that located at page 6, lines 5-15:

-- Duct 14 includes a first opening 22, an interior sloped side 24 ~~and~~, a second opening 26 ~~and~~ a third opening 27. First opening 22 is disposed to receive part 20 after the part is detached from web 21. Interior sloped side 24 creates first opening 22 ~~and~~, second opening 26 ~~and~~ third opening 27.

As shown in figure 1, second opening 26 of duct 14 may be smaller than first opening 22, and third opening 27 may be larger than second opening 26. However, second opening 26 may also be substantially the same size or larger than first opening 22. As shown in figures 1 and 2, the first, second and third openings 22, 26, 27 are vertically aligned along at least one edge thereof (left edge as shown in figure 1, and back left and right edge as shown in figure 2). Additionally, duct 14 is shown with a single interior sloped side 24, however, a plurality of substantially parallel interior sloped sides may form first opening 22 and second opening 26. For example, figure 4 is a two-dimensional cross-section of an apparatus 40 including duct 42. In this embodiment, duct 42 includes multiple interior sloped sides 44, 46 that form a first opening 48 and a second opening 50 that is substantially the same size as first opening 48. --
